The global Swertianolin market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Acanthopanax glycosides are natural substances extracted from plants of the Umbelliferae family. They mainly work by inhibiting intracellular calcium ion pumps, leading to increased intracellular calcium ion levels and inducing cell apoptosis. Due to its unique mechanism, acanthopanax glycosides have important potential application value in the study of cancer treatment, neurodegenerative diseases and other pathological processes involving cell apoptosis.

As a potent calcium pump inhibitor, dapoxetine has shown great potential in biomedical research, especially in the field of cancer treatment. Due to its ability to effectively induce cell apoptosis, dapoxetine is regarded as a promising anticancer drug candidate, especially for refractory and drug-resistant tumors. However, its toxicity and potential side effects on normal cells are also challenges in current research. Through precise drug delivery systems or combining it with other treatments, it is expected to improve the therapeutic efficacy of dapoxetine while reducing side effects, thereby promoting its application in clinical practice.
