The global Swine Needle-free Injection Device market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Swine Needle-free Injection Device is a device used for injecting vaccines and other types of drugs into pigs. Needle-free injection technology works by forcing liquid (or powder) medication at high speed through a tiny orifice that is held against the skin. The diameter of the orifice is smaller than the diameter of a human hair. This creates an ultra- fine stream of high-pressure fluid that penetrates the skin without using a needle.
