Swivel head offset shears is an electric or pneumatic shearing tool designed for efficient cutting of metal sheets and complex contours. Its biggest feature is that the shearing head can be rotated a certain angle in the horizontal direction. With the offset blade structure, the operator has a greater field of view and flexibility when working on curves, corners or edges. This tool is usually used for rapid shearing of materials such as aluminum plates, stainless steel plates, galvanized steel, and color steel tiles. It is widely used in roof installation, HVAC, sheet metal processing, automobile modification, and building maintenance. Compared with traditional straight-head electric shears, Swivel head offset shears have stronger conformability and operating comfort, and can maintain continuous and smooth cutting efficiency in narrow spaces and complex paths. It is a common equipment for professional sheet metal workers and roof construction personnel.
