The global Synchronous Reluctance (SynRM) Motors market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Synchronous Reluctance (SynRM) Motors are synchronous motors that work by utilizing the unequal reluctance in the direct-axis and quadrature-axis directions of the rotor to generate reluctance torque. Synchronous reluctance motors have simple technology, low material cost, and are widely used.

In recent years, it has been considered as a viable alternative to induction motors due to its robust construction, cost penalty and maintenance. The motor runs at synchronous speed due to the magnetic locking between the stator and rotor fields. In terms of performance, it offers fast dynamic response, higher efficiency, power density and torque.
