With growing demand in downstream market, the Synthetic Diamond is forecast to a readjusted size of US\$ 2931.6 million by 2030 with a CAGR of 7.1% during review period.

The research report highlights the growth potential of the global Synthetic Diamond market. Synthetic Diamond are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Synthetic Diamond. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Synthetic Diamond market.

Synthetic diamond is usually produced by subjecting graphite to very high temperatures and pressures. Synthetic diamond resembles natural diamond in most fundamental properties, retaining the extreme hardness, broad transparency (when pure), high thermal conductivity, and high electrical resistivity for which diamond is highly prized. Because synthesis is an expensive process, large stones of gem quality are rarely made. Instead, most synthetic diamond is produced as grit or small crystals that are used to provide hard coatings for industrial equipment such as grinding wheels, machine tools, wire-drawing dies, quarrying saws, and mining drills. In addition, diamond films can be grown on various materials by subjecting carbon-containing gas to extreme heat, and those layers can be used in cutting tools, windows for optical devices, or substrates for semiconductors.

Global key players of synthetic diamond include Element Six, Zhongnan Diamond,

Huanghe Whirlwind, Diamond Foundry, Sino-Crystal Diamond, etc., mainly located in North America, Europe, China, Southeast Asia, Japan, and South Korea. The top five manufacturers occupy more than 70% of the market share, with the largest producer being Element Six, accounting for 26%. North America is the largest market with about 47% market share, followed by Asia Pacific with 36%. In terms of product type, HPHT synthetic diamond is the largest segment with a share of about 59%. Also in terms of downstream, diamond is the largest downstream segment with a 35% share.
