The global Synthetic Quartz Crystal market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Synthetic quartz crystal refers to artificially created quartz crystals that have the same chemical composition and crystal structure as natural quartz. Synthetic quartz crystals are produced through a process known as hydrothermal synthesis. In this method, a mixture of water and chemicals, including silicon dioxide, is heated under high pressure in a controlled environment. The heat and pressure facilitate the growth of quartz crystals over a period of time. The resulting crystals are carefully controlled to have the desired properties and characteristics.
