Abstracts

The global Synthetic Roofing Tile market size is predicted to grow from US\$ 223 million in 2025 to US\$ 310 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Synthetic roofing tiles are considered an eco-friendly roofing option as they are often made from recycled rubber, such as old tires. By using recycled materials, rubber roofing shingles help reduce waste and minimize the consumption of new resources. As sustainability becomes a priority for both homeowners and commercial property owners, the demand for environmentally-friendly roofing solutions like rubber shingles continues to grow. Rubber roofing shingles often have excellent insulation properties, helping to regulate temperature and reduce energy consumption. They reflect sunlight and heat, reducing the heat transfer into the building and lowering cooling costs. As energy efficiency becomes increasingly important in construction, rubber roofing shingles are favored for their ability to improve a building's energy performance.
