Systems engineering software provides graphical programming and drag and drop modeling features to model complex systems and simulate industrial system performance. Systems engineers use systems engineering software to simplify the development of complex industrial systems as well as to create diagrams of how an industrial system should function. Industrial systems are often made up of many different elements and components which can make it hard to understand which components work together to produce a functioning unit. Systems engineering software simplifies this by displaying which elements must work together to produce effective system results.

The global Systems Engineering Software market size is projected to grow from US\$ 1189.6 million in 2023 to US\$ 2652.4 million in 2030; it is expected to grow at a CAGR of 12.1% from 2024 to 2030.
