T-type filter looks like the letter 't', so we call it T-type filter. T-type filter is a small equipment to remove a small amount of solid particles in the liquid, which can protect the normal operation of the equipment. When the fluid enters the filter cartridge with a certain size filter screen, its impurities are blocked, and the clean filtrate is discharged from the outlet of the filter. When cleaning is needed, just take out the detachable filter cartridge and reload it after treatment. Therefore, the use and maintenance is extremely convenient.
