Table Type Demagnetizer is a device used to remove magnetism from metal workpieces. It is widely used in manufacturing, processing and inspection industries. It generates a strong alternating magnetic field on the workbench to eliminate the residual magnetism on the surface of the metal workpiece and restore it to a non-magnetic state. This device usually consists of a sturdy metal casing, an embedded coil and a control panel, and can efficiently demagnetize workpieces of different shapes and materials. Table Type Demagnetizer has the characteristics of simple operation, fast demagnetization speed and uniform effect. It is especially suitable for batch processing of small to medium-sized workpieces. It is often used in precision instrument manufacturing, automotive parts processing and electronics industry.
