The global Tabless Design Battery market size is predicted to grow from US\$ 165 million in 2025 to US\$ 338 million in 2032; it is expected to grow at a CAGR of 11.0% from 2026 to 2032.

The maximum current transmission distance of Tabless design batteries is the height of the electrode rather than the length. The electrode height is usually 5%-20% of the electrode length. Therefore, the resistance is reduced by 5-20 times compared to a single-pole ear, thereby improving the transmission efficiency and greatly improving the battery's rate performance.

United States market for Tabless Design Battery is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
