The term 'tablet-making press' refers to the process of tablet-making, which is widely known in the pharmaceutical industry. The equipment for this tablet-making process is a tablet-making press, also known as a rotary-forming machine.

The powder of the mixed material for tablets is automatically released and fed into the hole of a mortar which is a metal mold. A pair of metal molds called pestles presses the material from above and below to form it into the shape of tablets, which are then taken out as pills. This process is performed continuously while the machine rotates, enabling mass production of tablets.
