Tablet picking streamlines the conventional picking process by utilizing tablets or smartphones instead of paper lists. Traditionally, picking involves selecting products and parts from warehouses and factories based on slips and lists for further processing like inspection and packaging. It also facilitates the display of product storage locations and appearances, significantly reducing the likelihood of errors. Smartphone picking is a related term used specifically for processes utilizing smartphones.

Tablet picking plays a crucial role in various industrial sectors including electronics, machinery, automotive, chemical, food manufacturing, transportation, logistics, healthcare, and retail. It is particularly beneficial in warehouses with a large inventory of components, aiding in error prevention, paperless operation, and efficiency enhancement.
