A tableting machine, also known as a tablet press, is a mechanical device used in the pharmaceutical industry to compress powder or granules into tablets. It is an essential equipment in the tablet manufacturing process. The machine consists of a hopper that holds the powder or granules, a feeding mechanism that delivers the material into the compression area, and a set of punches and dies that compress the material into the desired tablet shape and size. The machine applies pressure to the material, causing it to bind together and form a solid tablet. Tableting machines can vary in size and complexity, ranging from small manual machines to large automated systems capable of producing thousands of tablets per minute.
