A tabletop active vibration isolation platform, also known as a vibration isolation table or active vibration control system, is a specialized device used to eliminate or minimize vibrations and disturbances that can affect sensitive equipment placed on a table or surface. The platform utilizes various technologies such as sensors, actuators, and control systems to actively detect and counteract vibrations in real-time. It works by continuously monitoring the vibrations and generating equal and opposite forces to cancel out the disturbing motion. This ensures that the equipment placed on the platform remains stable and unaffected by external vibrations or disturbances. Tabletop active vibration isolation platforms are commonly used in scientific research, precision manufacturing, microscopy, laser systems, and other applications where stability and precise measurements are essential. They provide an isolated and controlled environment, allowing for accurate and reliable performance of sensitive equipment.

The global Tabletop Active Vibration Isolation Platform market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
