Tabletop clear sneeze guards are protective barriers that are traditionally placed over food that is on display to prevent contamination by bacteria or other germs which can result from people sneezing, coughing, or even simple exhalation at close distances to the food. Besides the use of shields over open displays of food, similar barriers appeared to isolate essential workers from potential exposure to the virus as a result of interaction with customers and the public at large. Retail stores, banks, gas stations, post offices, and other businesses began installing transparent barriers to minimize the possibility of airborne pathogens spreading to workers from interaction with people on a daily basis.
