The food and beverage industry is focusing on replacing sugar with sugar substitutes. This is creating a cost-cutting advantage for production. This is because, when compared with sugar, these substitutes are required in lesser quantities for the same sweet taste. This has accelerated the demand for sweeteners. Low-intensity sweeteners (LIS) can be consumed by people with diabetes. The lower calorie value of LIS controls insulin secretion, which in turn controls the blood sugar level. The demand for LIS is increasing in North America and is driving the sales of sweeteners.
