The global Tactical Truck market size is predicted to grow from US\$ 7728 million in 2025 to US\$ 10230 million in 2032; it is expected to grow at a CAGR of 4.2% from 2026 to 2032.

A Tactical Truck is a motor vehicle designed for military combat and emergency response missions. They usually have strong off-road capability and carrying capacity, and can transport personnel, supplies and equipment in various terrains and harsh environments. Tactical trucks are usually equipped with safety protection measures such as bulletproof glass, bulletproof chassis, and bulletproof tires to provide better protection. In addition, they may also carry weapon systems, such as machine guns, rocket launchers, etc., to provide fire support. Tactical trucks are one of the critical pieces of equipment for the military and emergency response agencies, providing strategic and tactical advantages on the battlefield.

Military planners are replacing decades-old fleets that no longer match today's networked battlefield. Saudi Arabia lifted its 2025 appropriation to USD 78 billion and set a 2030 goal of sourcing 50% of systems domestically, a policy that stimulates factory partnerships and knowledge transfer. Saudi Arabia Targets 50% Defense Localization, similar priorities appear across Asia, where governments insist that each new Tactical Truck integrates encrypted radios, counter-IED wiring, and modular armor. Fresh platforms thus cost more per unit, yet buyers tolerate the premium because they value payload flexibility and digital resilience. Legacy vehicles that date to the Cold War suffer mounting maintenance bills and cybersecurity gaps. The US Army's Family of Heavy Tactical Vehicles order, worth USD 1.54 billion, placed with Oshkosh through 2029, illustrates structured replacement that sweeps away 1980s-era trucks. European forces followed suit; Germany signed a logistics contract for EUR 330 million (USD 383.6 million) covering 568 new Rheinmetall trucks in 2025. The recapitalization wave is global because incremental upgrades can no longer fix obsolete electrical architectures.
