The global Talacotuzumab market size is predicted to grow from US\$ 71.41 million in 2025 to US\$ 113 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Loncastuximab tesirine (trade name Zynlonta) is a humanized CD19-targeted antibody-drug conjugate (ADC). It consists of a CD19-targeted monoclonal antibody, a cleavable linker, and a pyrrolobenzodiazepine (PBD) dimer toxin. It is mainly indicated for the treatment of CD19-positive B-cell malignancies such as relapsed or refractory diffuse large B-cell lymphoma. Its mechanism of action involves the specific binding of the antibody to the CD19 antigen on the surface of tumor cells, followed by internalization into the cells and release of the toxin. The toxin induces interstrand DNA crosslinks to block DNA replication and transcription, thereby killing tumor cells. Featuring high targeting specificity and potent antitumor activity, it provides an important therapeutic option for lymphoma patients who have received multiple prior lines of therapy. In 2025, global Loncastuximab production reached approximately 7,360 vials

As one of the first CD19-targeted antibody-drug conjugates launched globally, loncastuximab tesirine holds an important position in the field of relapsed and refractory lymphoma due to its unique PBD toxin mechanism and precise targeting. However, its overall market size is constrained by its current approved indications. With a steady commercialization process, it mainly targets a niche patient population receiving later-line therapy, showing moderate market growth and focusing on consolidating its existing therapeutic position in the short term. In the competitive landscape, the drug faces intense pressure from CD19-targeted CAR-T therapies, bispecific antibodies, and similar ADCs, with its differentiated advantages lying in convenient administration and accessibility. Its long-term growth potential highly depends on the expansion to second-line and frontline indications, the development of combination therapies, and global market penetration. If key clinical progress proceeds smoothly, it is expected to break

through current market constraints and further expand its share in targeted therapies for B-cell lymphoma.
