Talc heavy duty isolating insulators are insulating devices used in a variety of applications within electrical and distribution systems. This type of insulator is made from a talc-filled material, often including talc-filled polymers or ceramic compounds. Talc is a natural mineral known for its electrical insulating properties.

The 'Heavy Duty' designation means these insulators are designed to withstand higher mechanical loads and more challenging environmental conditions than standard or lightweight insulators. They are typically used where there is increased stress on the insulation due to factors such as increased voltage, wind loading or other mechanical forces.
