Abstracts

The global Tank Mix Adjuvants market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Pesticide formulation products (such as emulsifiable concentrates, wettable powders, suspensions, emulsions in water, microemulsions, water-dispersible granules and dispersible oil suspensions, etc.) are all diluted with water and then sprayed. During the application process, due to factors such as drift, evaporation, droplet rebound, loss, poor wetting and spreading of the pesticide, and poor penetration, absorption or distribution of the pesticide, these factors will eventually cause certain losses when the pesticide reaches the final activity site in the plant. Therefore, this is also the reason for the low spray efficiency. In order to improve this efficiency, it is usually possible to add tank-mixed adjuvants when spraying. The barrel-mixed adjuvants can play a role including anti-drift and increase the wetting, spreading, covering, adhesion, penetration, absorption, anti-rain erosion and moisturizing of the leaf surface. The ultimate goal is to improve the efficacy of the pesticide, reduce the dosage, increase the utilization rate of pesticides, and reduce the cost of use for farmers; at the same time, it reduces the pollution of pesticides to crops, soil, water and air, thereby protecting the ecological environment and food safety.

United States market for Tank Mix Adjuvants is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
