In 2025, global sales volume of Tantalum Diboride was approximately 13 tons, with an average global market price of around USD 1200/kg. The gross margin of major manufacturers in the industry was approximately 30%-45%.

Tantalum Diboride, with the chemical formula TaB_2 and CAS No. 12007-35-1, is a typical refractory metal diboride and an important material in the fields of ultra-high-temperature ceramic and hard functional ceramic. It combines the high-temperature resistance and high hardness of ceramic materials with the excellent electrical and thermal conductivity of metallic materials, and is typically supplied as gray-black or black powder. The product features a high melting point, high hardness, wear resistance, corrosion resistance, good electrical and thermal conductivity, and strong high-temperature stability. It can be used in powder metallurgy, thermal spraying, target and thin-film preparation and other processing routes, making it a high-performance specialty functional material suitable for ultra-high-temperature, severe wear, strong erosion and corrosive environments.

The upstream materials of Tantalum Diboride mainly include tantalum powder, tantalum oxide, boron powder, carbon sources, protective gases and high-temperature synthesis equipment. Its production processes generally involve borothermal reduction, carbothermal reduction, high-temperature solid-state reaction, crushing and classification, and purification treatment. Downstream applications mainly include aerospace thermal protection material, high-temperature industrial component, wear-resistant protective coating, electronic functional film and composite material reinforcement. It also has continuous application potential in frontier material research,

specialty coatings for new energy applications and other emerging scenarios.

United States market for Tantalum Diboride is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
