The global Tantalum Nitride Powder market size is predicted to grow from US\$ 123 million in 2025 to US\$ 254 million in 2032; it is expected to grow at a CAGR of 11.0% from 2026 to 2032.

In 2025, global sales of tantalum nitride powder reached 680 tons, with an average selling price of US\$185,000 per ton. Tantalum nitride powder is a high-performance ceramic-metal composite powder material prepared from high-purity tantalum powder through nitriding reaction or plasma process. It has high melting point, high hardness, excellent conductivity and corrosion resistance, and is widely used in semiconductor thin film deposition targets, hard coatings, electronic components, capacitors and aerospace high-temperature structural materials. It can maintain stable performance in high temperature and high corrosion environments and is an important functional material for advanced electronics and high-end manufacturing. The total industry capacity is about 850 tons, with a gross profit margin of 35%-50%. The upstream raw materials mainly include high-purity tantalum powder, nitrogen and high-temperature reaction consumables. Downstream suppliers are mainly semiconductor material manufacturers, target manufacturers and special coating companies. The future development is concentrated in advanced process semiconductor thin film materials, high-temperature functional coatings and high-end electronic devices. Demand is driven by the upgrading of semiconductor manufacturing and the development of high-end equipment. Business opportunities are reflected in the high added value growth space brought about by the domestic substitution of high-purity nano-level powder and the continuous expansion of new electronic materials.
