The global Tape Cutter market size is predicted to grow from US\$ 1324 million in 2025 to US\$ 1991 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

A tape cutter is a convenient tool for cutting tape quickly and accurately. One end of the tape cutter is usually equipped with a device for placing the tape, and the other end is equipped with a blade or sawtooth for cutting the tape. These machines have a variety of designs. Some are small and easy to carry and move, such as the common tape holders used in offices or homes; some are fixed on the table and have complex functions for controlling the feeding and cutting process. They are ergonomically designed and more convenient and comfortable to use. The tape cutter controls the feeding and cutting process of the tape mechanically or electronically. For example, some tape cutters use laser cutting technology, which uses the high coherence, high intensity and high directionality of the laser to irradiate the light on the tape, so that the surface of the tape is subjected to strong heat energy, causing the temperature to rise sharply, forming rapid melting or vaporization, thereby completing the cutting. Other tape cutters may use mechanical blades for cutting, and achieve precise cutting of the tape by adjusting the position and angle of the blade and controlling the feeding speed.

United States market for Tape Cutter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Tape Cutter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
