Tape Remover is a UV film and cutting film adhesive tape viscosity reduction and removal of the adhesive fully automatic equipment. In the semiconductor chip production process, wafer should be fixed on the frame with wafer film before wafer cutting. After the wafer cutting process is completed, UV light is used to illuminate the fixed film to make the UV film sticky curing and hardening, so as to reduce the adhesion of wafer fixing film and facilitate the smooth production of subsequent packaging process. In other words, UV tape has strong bonding strength, and it sticks firmly to the chip during the chip grinding process or chip cutting process. When the uv radiation, the bonding strength becomes low. Therefore, the wafer or chip is easy to peel off from the adhesive tape after uv irradiation, tape remover solves the degluing process of wafer, glass and ceramic cutting process.
