A tape switch is a thin tape-shaped switch, also called a pressure-sensitive switch. It contains two thin electrodes, top and bottom, inside, and when force is applied in the direction of thickness, the contact points of the electrodes are connected and the switch is energized. In addition to its thinness, the length of the switch allows it to sense any position where it is pressed. Many of them have protrusions on the surface to facilitate response. A similar structure with a larger area is called a mat switch.

Some products are available in lengths from several inches to several feet and can be disconnected at any position by the user. Because of their wide detection range, they can be used for a variety of applications. Many products are thin and can be bent freely, making them suitable for curved surfaces. Lightweight, they can be easily attached with double-sided tape. Some products with waterproof treatment can be used in places where water splashes or outdoors.
