## Abstracts

The global Tapered Bearing market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The tapered bearing is designed through optimization and standardizes the installation dimensions in a series, so that the product can be universally interchanged in the world: the raceway surface of the inner ring and the outer ring has convexity, which effectively eliminates the phenomenon of edge stress concentration, and the product performance is safer and more reliable. .

Bearing is an indispensable component in contemporary mechanical equipment. Its main function is to support the mechanical rotating body, reduce the friction coefficient between the mechanical rotating bodies, and ensure the rotation accuracy of the mechanical rotating body. It is known as the 'joint of mechanical equipment'. It is widely used in various industries in the country. As a basic and strategic industry of the country, the bearing industry's development level and industrial scale reflect the comprehensive industrial strength of a country, and play a pivotal role in the national economy and national defense construction.
