The single-line production capacity is approximately 150,000 pieces/year, with an average gross profit margin of approximately 25-40%.Tapered Coupler is passive optical devices that fuse and stretch optical fibers at high temperatures, allowing the cores to exchange light energy within the fusion zone. They are primarily used to distribute or combine optical signals from one or more optical fibers and are widely used in fiber-optic communication networks and test equipment. Their core technology is fused tapering, which controls the fiber torsion angle and length during the stretching process to determine the optical signal distribution ratio at the output port.

The upstream supply chain for Tapered Coupler centers around suppliers of raw materials and specialized equipment, primarily high-purity quartz preforms, specialty coating materials, and precision manufacturing equipment such as taper machines and fusion splicers. Downstream, they closely connect with optical module manufacturers, communications equipment vendors, system integrators.
