The product is a monoclonal antibody of Taq enzyme used in hot-start PCR technology. After binding to Taq enzyme, it inhibits DNA polymerase activity at low temperature, and can effectively inhibit non-specific annealing of primers and non-specific amplification caused by primer dimers under low temperature conditions. Hieff® anti-Taq DNA Polymerase Antibody denatures in the initial DNA denaturation step of the PCR reaction, and the DNA polymerase activity is restored to achieve the effect of hot-start PCR. This product does not require special antibody inactivation treatment and can be used under conventional PCR reaction conditions.
