Abstracts

According to this study, the global Targeted DNA Sequencing market size will reach US\$ million by 2031.

Targeted DNA sequencing is a technique for separating genomes or genomic regions. The technology enables researchers to analyze data, focus time and expense on the target target area, and allows sequencing at advanced exposure levels. Targeted DNA sequencing is an important tool for analyzing mutations in specified samples.

Targeted DNA sequencing plays an important role in sequencing. It has scalability and rapid assessment of target targeted genes. By reducing costs and saving time, multiple genes can be evaluated at once, and a smaller and manageable data set can be generated.
