lncRNA is non-coding RNA with a length of more than 200 nucleotides. Compared with mRNA, lncRNA is generally low in expression and has stronger tissue specificity. As a hot spot of RNA research, lncRNA regulates the expression of coding genes at various levels, including epigenetic inheritance, transcription and post-transcription. Different from traditional chip inspection, lncRNA analysis combined with high-throughput sequencing technology and bioinformatics analysis can comprehensively excavate the information of lncRNA in samples. lncRNA sequencing technology has been widely used in genetic improvement of species, and disease studies on occurrence, development, diagnosis, and treatment.

The global Targeted lncRNA Single Cell Sequencing market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
