DNA damage leads to the incorporation of defects and aberrations in the genome that often result in functional mutations. When these mutations occur in genes coding for vital proteins and/or enzymes, it leads to the development of genetic diseases. However, our biological system is equipped with a robust repair mechanism capable of correcting damaged DNA sequences. PARP inhibitors and other similar therapeutics are designed to augment the body's innate DNA repair mechanism and aid in the treatment of diseases associated with genetic aberrations. This report mainly focuses on targeting DNA repair drugs market.

In 2022, Asia-Pacific holds highest share in targeting DNA repair drugs .
