Tungsten Carbide (TC) drawing dies are essential tools in the wire drawing industry, designed for shaping and sizing wire by pulling it through the die under tension. These dies are made from Tungsten Carbide, a composite material comprising tungsten carbide particles cemented together with a metal binder, typically cobalt or nickel. This combination results in a material that is incredibly hard and wear-resistant, yet more economical than diamond drawing dies, making TC dies suitable for a wide range of applications.

The global TC Drawing Dies market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
