TEC cooling sheet, also known as thermoelectric cooling device, semiconductor thermoelectric cooling assembly, cooling sheet, semiconductor thermoelectric cooling chip, is an electronic device that uses the Peltier effect of semiconductor materials to achieve cooling or heating. There are many types of semiconductor cooling sheet (TEC) products, including single-stage thermoelectric cooling devices, multi-stage thermoelectric cooling devices, micro thermoelectric cooling devices, ring thermoelectric cooling devices and other types.

With the continuous development of semiconductor refrigeration technology, TEC has been widely used in various fields by virtue of many advantages that traditional temperature control methods do not have, such as: air conditioning systems in the automotive industry, portable refrigerators in civilian life, biomedicine Insulin needle preservation boxes in the military, temperature control of navigation systems in aerospace and military, precise temperature control of precision instruments in electronic technology, etc. In 2022, the market size of my country's semiconductor refrigeration chip (TEC) will be 1.139 billion yuan; the demand scale in the field of electronic appliances will be 373 million yuan; the scale in the communication field will be 175 million yuan; the scale in the medical experiment field will be 124 million yuan; the scale in the automotive field will be 86 million yuan RMB 269 million in the industrial sector and RMB 112 million in aerospace, military and other fields.
