Teflon nonstick pans are a type of cookware that has a special coating that makes its surface nonstick. This coating is usually Teflon, the trademark of polytetrafluoroethylene. This coating makes it difficult for food in the pot to adhere to the bottom or side walls of the pot, thereby reducing the amount of grease required for cooking and making it easier to remove and clean food. Teflon non-stick pans are usually made by spraying a layer of Teflon coating on the surface of the pan, and then using a specific processing technology to make it evenly adhere to the surface of the pan. This coating has excellent heat resistance and non-stick properties, which can resist high temperatures and food adhesion during cooking, making the pot easier to clean and maintain. Teflon non-stick pans, usually made of aluminum alloy or stainless steel, are popular for their good heat conduction properties and durability. They are suitable for various cooking methods, such as frying, stir-frying, boiling, stewing, etc., and can be used to cook a variety of ingredients, from vegetables and meat to omelettes and pancakes. Overall, Teflon nonstick pans are convenient and practical cookware that make the cooking process easier, healthier and cleaner.

The global Teflon Nonstick Pan market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
