The global Telecentric Camera Objective market size is predicted to grow from US\$ 139 million in 2025 to US\$ 196 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

Telecentric Camera Objective, also called Telecentric lens, is a compound lens that has its entrance or exit pupil at infinity; in the prior case, this produces an orthographic view of the subject. This means that the chief rays (oblique rays that pass through the center of the aperture stop) are parallel to the optical axis in front of or behind the system, respectively. The simplest way to make a lens telecentric is to put the aperture stop at one of the lens's focal points. Such lenses are used in machine vision systems because image magnification is independent of the object's distance or position in the field of view.

Global key players of Telecentric Camera Objective include Moritex, Kowa, CBC, etc. The top three players hold a share of 40%. Europe is the largest market, with a share of 40%, followed by Asia-Pacific and North America, with share 30% and 27%, separately. In terms of product type, Object Square Telephoto Lens is the largest segment, occupied for 88 percent. And in terms of application, Area Scan Camera has a share of 77%.
