According to this study, the global Telecom Electronic Manufacturing Services (EMS) market size will reach US\$ 122171 million by 2031.

Telecom Electronics Manufacturing Services (EMS) refers to professional manufacturing and service solutions provided to the telecommunications industry. EMS companies usually work with original equipment manufacturers (OEMs) to produce electronic equipment and components for them, including a full range of services such as design, production, testing, assembly, logistics and after-sales service. EMS in the telecommunications field focuses on providing high-quality electronic products and solutions that meet telecommunications industry standards.

Today, mobile connectivity is not only a means for people to communicate, but also an important tool for governments and other authorities to stimulate socioeconomic progress, support vulnerable people and build innovative solutions to enhance the wellbeing of society. Mobile connectivity has helped provide much-needed relief to victims of conflicts and various disasters around the world, and 4G and 5G networks, which now support more than 7 billion connections collectively, have formed the basis for the development of many smart solutions across various economic sectors. Mobile technologies and services now generate around 5.8% of global GDP, a contribution that amounts to \$6.5 trillion of economic value added. By 2030, this figure will rise to almost \$11 trillion, or 8.4% of GDP. Much of this will be driven by countries around the world increasingly benefiting from the improvements in productivity and efficiency brought about by the increased take-up of mobile services and digital technologies, including 5G, IoT and AI.
