The global Teleprompter Bluetooth Remote Control market size is predicted to grow from US\$ 110 million in 2025 to US\$ 155 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

In 2025, the global production of Bluetooth teleprompter remote controls reached 7.0861 million units, with an average selling price of US\$15.91 per unit.

To address the problems of traditional teleprompters requiring manual operation, which disrupts the flow of speeches, is inconvenient to operate, and distracts users, Bluetooth teleprompter remote controls were developed. Since the widespread adoption of Bluetooth technology in the early 21st century, especially with the introduction of Bluetooth Low Energy (BLE) in version 4.0, Bluetooth teleprompter remote controls have achieved long-distance, low-latency, and precise control through wireless remote control technology, driving innovation in the field of intelligent content creation tools. Currently, Bluetooth teleprompter remote controls are widely used in live streaming, speeches, teaching, conferences, and film and television production.

Regarding the production capacity of Bluetooth teleprompter remote controls in 2025, the annual capacity of a single production line is generally 350,000-400,000 units, with an industry average capacity utilization rate of approximately 87%. The gross profit margin is approximately 18.37%.

The upstream of the teleprompter remote control supply chain includes suppliers of core components such as integrated circuits, capacitors, resistors, and printed circuit boards, as well as Bluetooth chips; downstream applications cover home appliances, smart homes, and consumer electronics, relying on online channels for distribution. The

various links in the supply chain collaborate closely, and continuous technological iteration drives industry upgrading.
