The global Teleradiology Solutions market size is predicted to grow from US\$ 7851 million in 2025 to US\$ 11080 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

Teleradiology solutions refer to the technology and services that enable the transmission of medical images, such as X-rays, CT scans, MRIs, and other diagnostic images, from one location to another for remote interpretation and diagnosis by radiologists or other healthcare professionals. This technology has revolutionized the field of radiology by allowing medical images to be securely transmitted and accessed electronically, regardless of geographical distances.

The global shortage of radiologists in certain regions has led to a rising demand for teleradiology services, as it enables healthcare providers to access specialized expertise remotely. Teleradiology solutions offer improved access to diagnostic services, especially in underserved areas, rural regions, and areas with limited healthcare infrastructure.
