The global Telescope GOTO Equatorial Mount market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Telescope GOTO equatorial mount is a mount for instruments that compensates for Earth's rotation by having one rotational axis, the polar axis, parallel to the Earth's axis of rotation. This type of mount is used for astronomical telescopes and cameras.

The increase in economic investment in astronomical research, the enhancement of national consumption power, and the promotion of national astronomy education policies are the main factors affecting market growth. The growth of the astronomy market will drive the market growth of equatorial mounts. Astronomy education is an approach used globally to spark interest in Earth, astronomy and space science across generations. Astronomy education and research brings together the full range of research - from the physics of invisible elementary particles to the nature of space and time to the biology of natural phenomena. These qualities make the study of astronomy a valuable avenue for increasing scientific awareness, by introducing scientific concepts to students at all levels and encouraging scientific thinking.
