## Abstracts

The global Telescopic Boom Crane market size is predicted to grow from US\$ 2376 million in 2025 to US\$ 3354 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Telescopic boom cranes are based on a pedestal slewing design with hydraulic cylinder luffing. The boom extension is a telescopic inner section that allows a more flexible and wider operational radius in use and leaves the crane stored in a compact position. These truck mounted cranes can be used for multiple work applications, such as electric line maintenance and construction, transmission and distribution, tree trimming and other related uses.

The growth of the market can be attributed to the increasing demand for telescopic boom cranes in oil & gas, offshore renewable energy, marine companies, and other applications. Growing demand for telescopic boom cranes in the oil and gas industry is one of the major factors driving the growth of this market. Telescopic boom cranes are used in offshore drilling operations to lift heavy objects such as pipelines, storage tanks and other equipment. The increasing number of offshore projects has increased the demand for cranes in this sector.
