The global Telescopic Gangway market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The global telescopic gangway market has been experiencing steady growth due to several factors:

Safety regulations and standards: The maritime industry, port authorities, and offshore facilities have strict safety regulations in place to ensure the well-being of personnel and compliance with international standards. Telescopic gangways play a vital role in providing safe passage between vessels, docks, jetties, or platforms, meeting these regulatory requirements.

Growth in marine and offshore industries: With increasing global trade and offshore activities, there is a growing need for reliable and efficient gangway systems. Telescopic gangways offer a convenient solution for personnel transfer and equipment loading/unloading, supporting the expansion of marine and offshore industries.

Infrastructure development: Investments in port infrastructure, shipbuilding, and offshore installations worldwide drive the demand for telescopic gangways. As new ports and facilities are constructed or existing ones upgraded, the need for high-quality gangway systems increases.

Focus on operational efficiency: Telescopic gangways enhance operational efficiency by facilitating quick and safe boarding and disembarking processes. They improve turnaround times for vessels, reduce downtime, and optimize personnel flow.

Technological advancements: Manufacturers continue to innovate telescopic gangway systems by incorporating advanced features such as remote control operation, self-

leveling steps, automatic adjustment to varying tidal levels, and robust safety mechanisms. These technological advancements enhance usability, safety, and overall performance.
