TEM dielectric filter is an electronic filter designed based on transmission line theory. TEM is a mode of transmission line that represents transverse electromagnetic waves on the transmission line. TEM dielectric filters usually consist of a central conductor and two coaxial annular media. The central conductor and the annular media are coupled through a geometric structure. This structure can achieve high quality factor, low loss and wide bandwidth filtering characteristics, so it is widely used in the microwave and millimeter wave fields. TEM dielectric filters are commonly used for signal conditioning and filtering in antennas, radio frequency front-ends, communication systems, radar systems and other fields.
