## Abstracts

The global Temperature Calibration Services market size is predicted to grow from US\$ 1591 million in 2025 to US\$ 2395 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

To address the problems of inaccurate temperature measurement equipment, insufficient data reliability, and lack of a quality traceability system in industrial and scientific research fields, temperature calibration services have emerged. With the increasing demands for measurement accuracy in modern industrial quality control and scientific experiments, especially since the global implementation of quality systems such as those by the International Organization for Standardization (ISO), the field of metrology and calibration has undergone systematic development since the mid-20th century. Currently, temperature calibration services have developed into a professional technical service system encompassing various service models, including on-site calibration, laboratory calibration, and automated calibration systems. It utilizes high-precision standards such as constant temperature baths, dry-block calibrators, blackbody radiation sources, and standard platinum resistance thermometers. These services are widely used in pharmaceutical production, food processing, automobile manufacturing, energy and chemical industries, medical equipment, laboratory research, and metrology institutions. By establishing a traceability chain to national or international standards, it ensures the accuracy, consistency, and compliance of temperature measurement results, thereby effectively guaranteeing product quality, production process safety, and the authority of scientific data.
