The global Temperature Limiting Fuse market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Temperature Limiting Fuse is a safety device designed to protect electrical appliances or circuits from overheating. It consists of a small, heat-sensitive component that melts or breaks the circuit when the temperature exceeds a certain threshold. This threshold is predetermined based on the specifications of the device or circuit it's meant to protect.

Temperature limiting fuses are commonly used in various electrical devices such as hairdryers, toasters, and electric heaters, where there's a risk of overheating due to malfunction or excessive usage. By interrupting the circuit when the temperature rises beyond safe levels, these fuses prevent damage to the appliance and reduce the risk of fire or other hazards.

United States market for Temperature Limiting Fuse is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Temperature Limiting Fuse is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
