## Abstracts

The global Temperature and Salt Depth (CTD) Analyzer market size is predicted to grow from US\$ 279 million in 2025 to US\$ 459 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

The CTD analyzer is a measuring instrument used in ocean research. It is mainly used to measure the temperature (C), salinity (S) and depth (D) of seawater. It is usually equipped on marine research vessels or used in underwater detection equipment. CTD instruments provide valuable data on the physical and chemical properties of seawater by sampling continuous vertical profiles of the water column.

The ocean temperature, salinity and depth meter is a precision instrument used to measure seawater temperature, conductivity and depth. It is widely used in marine scientific research, environmental monitoring and resource development, and can provide high-precision marine environmental data.

CTD consists of multiple sensors and mainly measures three basic parameters:

**Temperature:** The temperature of seawater is measured by thermistors or thermocouples with an accuracy of up to 0.001°.

**Conductivity:** The conductivity of seawater is measured by conductivity sensors, and the salinity is calculated. Conductivity sensors usually use two or more electrodes to measure the ion concentration in seawater.

**Depth:** The water pressure is measured by pressure sensors to infer the depth. The accuracy of pressure sensors is usually within a few centimeters.

China's ocean temperature, salinity and depth meter (CTD) industry has experienced significant development in the past few decades, from initial import dependence to independent research and development and production. The rise of this industry not only reflects the progress of China's marine science and technology, but also demonstrates the country's emphasis on the development of marine resources.

**Policy support:** The Chinese government has introduced a series of policies to encourage the development of marine science and technology, including the '14th Five-Year Plan for National Marine Economic Development', which provide strong support for the ocean temperature, salinity and depth meter industry.
