Temperature sensing optical cable is a temperature detection device based on optical fiber sensing technology. It uses the sensitivity of optical fiber materials to changes in ambient temperature to achieve distributed temperature measurement. It is mainly composed of optical fiber, sheath, metal reinforcement, etc. The optical fiber usually contains single-mode or multi-mode fiber for transmitting laser signals and calculating temperature distribution through changes in scattered light. This type of optical cable is suitable for high-precision temperature monitoring. Its advantages include high sensitivity, anti-electromagnetic interference, high temperature resistance, etc., which can achieve long-distance and large-scale real-time temperature monitoring.
