A tennis ball pressurizer is a device used to maintain the pressure of a tennis ball. The working principle of the device is to seal the tennis ball in an airtight container and apply external air pressure to prevent the gas inside the ball from leaking or losing, which can extend the service life of the ball. Tennis balls are filled with gas when they leave the factory and have a certain pressure to maintain elasticity and playability. However, over time, the tennis ball will gradually lose internal pressure, resulting in a decrease in elasticity, affecting the playing experience.
