Tent film substrate is the basic material that constitutes the tent membrane structure. This material is usually woven from high-strength and durable fibers or fabrics as the support and bearing layer of the tent membrane structure. The selection and performance of the tent film substrate directly affects the overall strength, stability, durability, waterproof and fireproof properties of the tent. Specifically, the tent film substrate may include polyester fiber, nylon, glass fiber and other materials, each of which has different advantages and application ranges. For example, polyester fiber is low-cost and has good weather resistance; nylon has strong wear resistance and excellent tear resistance; glass fiber has a high elastic modulus and high tensile strength, and is suitable for occasions with high strength requirements.

The global Tent Film Base Material market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
