Terahertz (THz) human body security inspection equipment is a device that utilizes Terahertz waves (Terahertz, THz) to conduct security inspections on the human body. Terahertz waves refer to electromagnetic waves with frequencies ranging from 0.1 to 10 THz (1 THz = 10?? Hz), positioned between the microwave and infrared spectral regions. These waves are capable of penetrating non-polar materials such as clothing, plastics, and paper, while posing virtually no ionizing radiation hazard to the human body. This equipment operates by emitting Terahertz waves and receiving the signals that penetrate or are reflected by the human body. These signals are then converted into images or data through signal processing techniques. Security personnel can use these images or data to determine whether the person being inspected is carrying any prohibited items.
